How the poll was conducted

The Energy Risk Commodity Rankings survey was live between November 24, 2021 and January 25, 2022 and received valid responses from 1,040 individuals. The survey asked respondents to vote for their top three dealers and brokers in any markets in which they had been active over the previous year. The rankings poll is designed to reflect market participants' perception of a dealer or broker based on the overall quality of service they offer their clients. It is not intended to reflect volumes traded in any market. Instead, respondents vote according to a range of criteria including reliability, pricing, liquidity provision and speed of execution. The rankings are also not designed to present the views of a representative share of the commodity trading community, since the poll is open to any market participants, and the results could be influenced by the efforts of dealers and brokers to canvass their clients for votes. However, the *Energy Risk* team makes every effort to ensure that invalid votes are excluded from the final results. This includes instances where the same IP address is used to cast multiple votes, when groups of employees from the same desk vote for the same firm, or when one voter chooses the same firm indiscriminately throughout the poll.

Voters are also excluded if they do not trade in the market in which they have cast a vote. In addition, categories that do not attract enough votes are excluded from the final results.

The methodology

In order to create the final list of rankings, *Energy Risk* aggregates the results, weighting them by awarding three points for a first place, two points for second place and one point for third. The points are then added up and the highest placed firms in each category are listed in the Rankings tables. The Overall Rankings (Best overall dealer and Best overall broker etc) are calculated by adding up all the points accrued to each firm across the different sections (Oil, Gas, Power etc). Following closure of the poll, the results are subject to an internal review process, which can result in categories being dropped or aggregated if they do not have enough votes. The outcome of the review is final.
