

The Journal of
Network Theory
in Finance

Call for papers: Special issue
Multilayer Networks

Many complex systems, including financial and economic systems, present specific characteristics which can be modeled using multilayer networks. Therefore, resorting to multilayer networks to study important problems in such systems can potentially provide significant insight.

The Journal of Network Theory in Finance invites original research on the topic of multilayer networks and themes including:

- Fundamental aspects of multilayer networks
- Modeling multiplex financial networks
- Financial and economic applications of multilayer networks
- Systemic risk and financial contagion modeling
- Social networks analysis
- Community detection in multilayer systems
- Financial market infrastructures and multiplex systems
- Statistical models of multiplex financial networks
- Supply chain multiplex models
- Trade networks
- Credit and common assets networks
